

LONGHAUL TRUCKING EQUIPS FLEET WITH AIRTAB® VORTEX GENERATORS

Albertville Minnesota. LongHaul Trucking is a medium sized fleet hauling high value specialty loads using flat bed trailers with Role-Tite™ covers.

Mr. Bob Ward, Equipment Sales and Service Manager heard about **Airtabs™** from some of his O/Os who had installed them.

"They were all saying the same things about the Airtab®...how they saved fuel and stabilized their vehicles. They also noticed how the tarps behaved...much less flapping than normal. We investigated their claims and after a trial, the decision to buy was not difficult. LongHaul found that **Airtabs™** perform exactly as claimed. They provide our drivers with a more stable and safer ride, better visibility in rain and an impressive 3% fuel savings when mounted on the tractor farings alone. We look forward to savings in the 4 to 5% range with all units equipped."

When asked about any other benefits, Mr. Ward continued: "The drivers love them because they reduce the "white knuckling" in gusty winds. The Airtab® product is simple to install and has no impact on our daily operations. The combination of a low purchase price and high fuel costs produces a remarkably fast payback period...in the 60 to 90 day range for our long range vehicles. The decision was obvious."

When asked for about any comparable products, Mr. Ward replied: "Airtabs are probably the most cost effective and practical after market fuel saving device to ever hit this industry. I'd recommend them to anyone."
